-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 5, 7-9, 11, 13 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson (4958814).

Johnson discloses framing jig for positioning and securing framing members, comprising:

- a rigid body of generally rectangular shape;
- a plurality of notches 15 opening to one side of said rigid body, each of said notches having open length and width dimensions conforming, respectively, to width and thickness dimensions of said framing members; and
- an opening 17 formed in said rigid body between two of said notches which may serve as a handle by which said framing jig is grasped; whereby when said framing jig is positioned with one of said notches around a pre-installed framing member, unsecured framing members may be positioned in the other of said notches to establish proper spacing during framing.
- The jig may be constructed of wood; see column 2, lines 50-56
- said plurality of notches are equally spaced along the one side of said rigid body.
- said opening is oval in shape.
- each of said plurality of notches 15 constrains a corresponding framing member 26 inserted therein along three sides, thereby serving as a brace against movement of said framing member.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3633

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2, 4, 6, 10, 12, 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson.

Johnson lacks the specific measurements for the length, width and thickness of the body, the length and width of the notches and the spacing of the notches. Such limitations are depending upon the frame member; there are many different types. Applicant is not claiming the frame in combination with the jig. Therefore one of ordinary skill in the art would have appreciated the size frame needed and the jig commensurate to the frame.
